WINNER IN THE CATEGORY SOFTWARE, COMMUNICATION & IT

LogiMAT honors SYNA.OS LOGISTICS as "BEST PRODUCT"

Hanover/Munich, May 31, 2022. SYNAOS GmbH, software provider for AI-optimized intralogistics, today received the "BEST PRODUCT" award in the Software, Communication & IT category from the organizer of LogiMAT in Stuttgart for its intralogistics management platform SYNA.OS LOGISTICS. LogiMAT, International Trade Fair for Intralogistics Solutions and Process Management, is the largest annual intralogistics trade fair in Europe.

SYNA.OS LOGISTICS is an innovative cloud-based system that manages the increasing complexity of intralogistics processes and grows with the dynamic requirements of customers. The platform offers a wide range of skills that revolutionize the way intralogistics works. SYNA.OS LOGISTICS synchronizes all transport vehicles – mobile robots such as AGVs and AMRs or manned vehicles such as forklifts – as well as assets, such as traffic lights or gates in a factory, a warehouse or logistics center, and employees. All this is achieved independent of manufacturer and based on real-time data. Algorithms distribute tasks, determine routes and continuously check whether course corrections are necessary. In the event of sudden failures or changes, the software immediately redistributes tasks, preventing delays.

This is made possible by computing power from the cloud: the algorithms always determine the best solution from 250,000 possible alternatives per second. The cloud-based SaaS approach and the standardized interfaces also lead to a low-effort and fast commissioning of SYNA.OS LOGISTICS and make the system easily scalable and expandable. SYNA.OS LOGISTICS is a leader in the implementation of the VDA 5050 interface and currently holds two world records for heterogeneity and scaling across VDA 5050.

SYNAOS co-founder and CEO Dr. Wolfgang Hackenberg: "We are thrilled and incredibly proud to have received this award from LogiMAT. The fact that we have won this renowned award proves that we are on the right track with our vision of a holistic intralogistics management platform! Our Mobile Robot Fleet Management is now being used successfully by global corporations such as Volkswagen and ZF, and our large partner network also supports the success of the platform. With our new Warehouse Control System, we have added another important building block to the SYNA.OS LOGISTICS Platform, which will be a real gamechanger, especially for e-commerce companies of all kinds."

The winners of the award, which is being presented for the 19th time this year, are selected by an independent jury that critically examines the submitted applications in the run-up to the trade fair. Jury members include representatives from business, academia and the media. The prize has now established itself as one of the most coveted awards in the intralogistics industry.

ABOUT SYNAOS

SYNAOS is a leading German AI startup that digitizes and automates intralogistics processes in factories and logistics centers. Since 2018, the company has been developing innovative software-as-a-service solutions for the control of automated guided vehicles and the integration of manually controlled vehicles. Among others, Volkswagen AG, ZF and the eCommerce company Connox already rely on SYNAOS.

Due to the enormous increase in efficiency of factories and logistics centers and the high flexibility of the software, SYNAOS paves the way for the innovations of tomorrow. The three SYNAOS founders, Dr. Wolfgang Hackenberg (CEO), Dr. Lennart Bochmann (CPO) and Tobias Gagern (CTO), gained years of experience in the automotive industry as well as in the IT environment before founding SYNAOS. In addition, a top-class advisory board and strong partners support the company in the implementation of its innovative ideas.
